Introduction

What Grok Bot Is

Grok Bot is an AI agent product from xAI (SpaceXAI). Unlike regular Grok chat, Grok Bots are named AI teammates that work on a persistent cloud computer. They can use a browser, filesystem, and terminal, sign into tools and websites the way a person would, and complete multi-step tasks. You message them like a colleague, and they return finished work or pause for approval.

Launched in beta in August 2026, Grok Bot is included with certain paid plans (Cursor Pro and higher, SuperGrok subscriptions, etc.). There is no separate standalone subscription. Bots can also have their own email addresses for signing up for services or contacting businesses.

REMEMBER

Grok Bot does real work on a cloud computer. Regular Grok answers questions. Use Bot when you want an agent to operate tools, websites, and multi-step workflows.

Chapter 1

Getting Access and Setting Up

Access Grok Bot through a qualifying Cursor plan or by linking a SuperGrok (or related) subscription. Install the desktop or mobile app and sign in.

1. Confirm you have access via Cursor Pro (or higher) or a linked SuperGrok plan.

2. Download the Grok Bot / Cursor app for your platform (macOS, Windows, Linux, iOS, Android).

3. Sign in with the appropriate account.

4. Create your first Bot and give it a clear name and description.

5. Start with a small, low-risk task to learn how it behaves.

> **TIP**
>
> Begin with one Bot and one bounded task. Expand only after you understand approvals and usage.

Chapter 2

Creating and Using Your First Bot

Create a Bot, describe its role, and message it like a teammate. Give it a clear job (for example, research accounts, draft messages, or reconcile expenses). The Bot works on its cloud computer and reports back.

You control when it needs approval. Set rules in the description or skills so it asks before sending external messages, posting, paying, or deleting. Review its actions regularly.

REMEMBER

A Bot’s description and skills define its behavior. Keep them focused. Require approval for any external or irreversible action.

Chapter 3

Skills, Routines, and Computer Use

Skills teach the Bot how to perform specific tasks. You can create them by describing a workflow or by having the Bot watch you perform a task once (screen recording for a limited time, without microphone). Routines schedule recurring work.

Computer use lets the Bot operate a browser and apps the way a human would when no dedicated integration exists. Plugins and connectors are preferred when available. Always review connected accounts and permissions.

TIP

Prefer official plugins or connectors over browser logins for sensitive accounts. Set ask-first rules for anything that leaves your environment.

Chapter 4

Teams, Email, and Advanced Features

You can run multiple Bots and have them coordinate (for example, a “chief of staff” Bot managing others). Shared team Bots and workspaces are available on team plans. Recently, Bots can claim their own email address (@mail.grokbot.com) to sign up for services, contact businesses, or schedule meetings.

Cloud environments persist so Bots can continue working when your local device is offline. Memory and context carry across sessions within the Bot’s configuration.

Chapter 5

Plans, Usage, and Limits

Grok Bot has no separate subscription. It is included with paid Cursor plans (Pro and above) and with SuperGrok, SuperGrok Plus, SuperGrok Heavy, and certain X Premium+ linkages. Each plan includes a weekly usage allowance. Additional usage may be available on a pay-as-you-go basis.

Usage is separate from regular Grok chat limits. Exact token or credit amounts are not always published; monitor the usage screen in the app. Team plans may require admin enablement for certain features such as email.

WARNING

Heavy multi-step agent work consumes usage quickly. Check your plan’s weekly allowance and review actions before scaling to many Bots or long-running tasks.

Chapter 6

Best Practices and Safety

• Start with one Bot and one clear, low-risk task.

• Write focused descriptions and require approval for external actions.

• Prefer plugins over browser logins for sensitive accounts.

• Review skills, routines, and connected tools before enabling them.

• Monitor usage and Bot activity regularly.

• Keep credentials out of prompts and descriptions.

• Use version control or backups for any important work the Bot touches.

• Stay current with official documentation as features evolve.

Appendix

Glossary and Resources

Grok Bot: An AI teammate that works on a persistent cloud computer and can operate tools and websites.

Skill: A packaged set of instructions or recorded workflow that teaches a Bot a specific task.

Routine: A scheduled or recurring task a Bot can run.

Cloud Computer: The remote environment (browser, files, terminal) where a Bot performs work.

Approval Gate: A rule that makes the Bot pause and ask before taking certain actions.

Resources

• x.ai / Grok Bot official pages and documentation

• Cursor plans and Grok Bot access information

• SuperGrok subscription details

• In-app help and usage dashboard
