2026

What Inside

Start — What Cursor is
Chapter 1 — How Caveman Install and Start
Chapter 2 — Tab — AI Finish Your Thought
Chapter 3 — Chat and Ask Questions
Chapter 4 — Composer and Agent — Big Changes
Chapter 5 — Rules, Context, and Smart Use
Chapter 6 — Plans, Limits, and Best Practices
Appendix — Words Caveman Need Know

Start

What Cursor Is

Caveman want write code. Caveman no want type every line. Cursor is code editor that have AI inside. Caveman type some code. Cursor guess next part. Caveman ask question. Cursor answer. Caveman say “make this feature.” Cursor change many files and do the work.

Cursor is based on VS Code. Looks like normal editor. But AI is built in deep. Works with many models. Helps caveman code faster and better.

REMEMBER

Cursor is the editor itself, not a plugin. Download it, open project, start coding with AI help.

Chapter 1

How Caveman Install and Start

Go to cursor.com. Download for your computer (Mac, Windows, Linux). Install. Open it. Sign in if want. Free Hobby plan let you try.

1. Download Cursor from official site.

2. Install like normal app.

3. Open folder or project.

4. Start typing. See AI suggestions.

5. Open chat or Composer when need more help.

> **TIP**
>
> Import your VS Code settings and extensions if you use them. Cursor is compatible.

Chapter 2

Tab — AI Finish Your Thought

When caveman type code, gray text appear. That is Tab suggestion. Press Tab to accept. Cursor look at your code, recent changes, and guess what come next. Can suggest one line or many lines.

Good for small edits and finishing thoughts. Unlimited on paid plans. Very useful every day.

REMEMBER

Tab is predictive autocomplete. Not just next word. It understand context and can jump to next place you might edit.

Chapter 3

Chat and Ask Questions

Open chat in Cursor. Ask about your code. “What this function do?” “How fix this error?” “Explain this part.” Cursor look at your project and answer.

You can select code first, then ask about it. Or ask general questions. Chat help caveman understand without leaving editor.

Chapter 4

Composer and Agent — Big Changes

Composer is for bigger jobs. Caveman describe feature or change. Cursor make plan and edit many files. Agent mode let AI do more steps by itself — search code, edit, run commands if allowed.

Good for new features, refactors, or fixing bugs across project. Start with clear request. Review changes before accept.

TIP

For big work, be specific. Say what files or behavior you want. Review diffs. Undo if not right.

Chapter 5

Rules, Context, and Smart Use

Caveman can make rules so Cursor follow your style. Put rules in special files. Tell it how you like code, what tests to run, what not to do.

Give good context. Select relevant files or describe problem clearly. Better context = better AI help. You can also use cloud agents for background work on higher plans.

REMEMBER

AI help best when caveman stay in control. Review suggestions. Accept what good. Reject what bad.

Chapter 6

Plans, Limits, and Best Practices

Cursor have free Hobby plan with limited Agent use. Pro about $20/month give more Agent and unlimited Tab. Higher plans (Pro+, Ultra) for heavy users. Teams plans for groups. Usage have two pools — Cursor models and other models. Check official pricing for current details.

Plan	About Price	Best For
Hobby	Free	Try it
Pro	~$20 / month	Regular coding
Pro+	~$60 / month	Daily agent use
Ultra	~$200 / month	Heavy users

Prices change. Always check cursor.com for latest plans and limits.

Smart Caveman Tips

- Start with free Hobby to see if you like it.
- Use Tab all day for small speed-ups.
- Use Chat to understand code.
- Use Composer/Agent for bigger features — be clear and review.
- Write rules so AI match your style.
- Watch usage so you do not hit limits unexpectedly.

WARNING

Agent use cost more. After included usage, more work can be billed. Check your plan limits.

Appendix

Words Caveman Need Know

Tab: Press Tab to accept AI suggestion for next code. Very fast for small edits.

Chat: Talk to AI about your code inside the editor.

Composer: Mode for describing bigger changes that touch many files.

Agent: AI that can do multi-step work, edit files, and sometimes run tools.

Rules: Instructions you write so Cursor follow your coding style and preferences.

Cloud Agents: Agents that can work in the background (higher plans).
