Chapter 6 — Best Practices for Vibe Coding
Appendix — Glossary and Resources

Introduction

What Vibe Coding on Replit Is

Vibe coding is the practice of building software by describing what you want in natural language and guiding an AI agent to implement it. On Replit, this happens inside a browser-based environment where Replit Agent can scaffold projects, write code, set up databases, test results, and publish applications—all from conversational prompts.

Replit provides a complete platform: the IDE, AI Agent, hosting, and database tools in one place. You focus on the goal and feedback; the Agent handles much of the technical implementation. This guide shows how to get started, run effective sessions, and manage usage.

REMEMBER

Vibe coding on Replit means describing outcomes and iterating with Agent. You remain the director. Always review and test what is generated.

Chapter 1

Getting Started with Replit

Create a free Starter account at replit.com. Paid plans (Core and Pro) unlock higher usage, more powerful Agent modes, private projects, and additional collaborators. Core is typically around $20 per month and includes monthly credits.

1. Sign up at replit.com.

2. Create a new project or start with Agent.

3. Familiarize yourself with the workspace (editor, console, Agent chat).

4. Explore Plan Mode if available on your plan.

5. Start with a small project to learn the loop.

> **TIP**
>
> Use the free Starter plan to experiment. Move to Core when you need more credits, private apps, or higher Agent capability.

Chapter 2

Your First Vibe Coding Session

Start with a clear goal. Describe the app you want: who it is for, what it should do, and key features. Example: “Create a simple task manager web app where users can add, complete, and delete tasks. Use a clean interface and store data in a database.”

Agent will typically propose a plan. Review it, then let it build. Test the result in the preview or browser, then give feedback for the next change. Build in small slices rather than requesting the entire finished product at once.

REMEMBER

Good vibe coding starts with a clear outcome. Break work into small, testable slices. Review every significant change.

Chapter 3

Working with Replit Agent

Replit Agent can create full applications, set up environments, provision databases, and iterate based on feedback. Modes such as Free Mode (lower cost within allowances), Power, and Max allow you to balance capability and credit usage. Plan Mode lets you collaborate on an approach before code is written.

Agent can also test its own output in a browser and attempt fixes. You can attach mockups or additional context when helpful. Always verify results yourself.

TIP

Use Plan Mode for larger features. Switch modes based on task complexity. Start with Free or lower-cost modes when learning.

Chapter 4

Iteration, Testing, and Refinement

After the first version, describe specific improvements: “Add user authentication,” “Make the layout responsive,” “Fix the bug where tasks disappear after refresh.” Test after each change. Use the built-in preview and, when ready, publish the app.

Replit includes hosting and database tools, so many apps can be published with minimal extra setup. Keep version control practices in mind and review code for important projects.

Chapter 5

Plans, Credits, and Modes

Starter is free with limited daily Agent credits. Core (~$20/month) includes monthly credits and higher allowances. Pro (~$100/month) provides more credits, parallel agents, and team features. Credits are consumed by Agent work in paid modes; Free Mode has separate allowances on paid plans.

Monitor usage in your account. Complex or long-running tasks consume more credits. Exact pricing and allowances change—check the official pricing page.

WARNING

Agent usage in Power or Max modes can consume credits quickly. Start with smaller tasks and Free Mode while learning. Review your plan’s limits regularly.

Chapter 6

Best Practices for Vibe Coding

• Start with a clear goal and small, testable slices.

• Write specific prompts that describe outcomes, not just tasks.

• Review and test every significant change.

• Use Plan Mode for complex features.

• Manage context by focusing the conversation.

• Monitor credit usage.

• Publish early and gather feedback.

• Stay current with Replit documentation and updates.

Appendix

Glossary and Resources

Vibe Coding: Building software by describing goals in natural language and guiding an AI agent.

Replit Agent: The AI coding agent built into Replit that scaffolds, writes, and iterates on apps.

Plan Mode: A mode for collaborating on an implementation plan before code changes.

Free Mode / Power / Max: Agent modes that balance cost and capability.

Credits: Usage units consumed by Agent work on paid modes.

Resources

• replit.com — main platform

• docs.replit.com — official documentation, including vibe coding guides

• Pricing page for current plans and credits

• Replit community and blog for examples and updates

About the Author

Er. Rishabh Aryan holds an M.Tech in Artificial Intelligence and Data Science from the Department of Computer Science and Engineering at the Indian Institute of Information Technology, Bhagalpur (Bihar). Contact: rishabh.250201011@iiitbh.ac.in. ORCID: 0009-0004-7595-9440.

This is an independent educational guide. Replit features, Agent capabilities, plans, and pricing change. Always consult the official replit.com site and documentation for the most current information.
