Introduction

Understanding the Meta AI Ecosystem

Meta AI encompasses both a free consumer assistant available across Meta's apps (WhatsApp, Instagram, Facebook, Messenger, and the meta.ai site) and the broader family of models that power it. These include the open-weight Llama models that anyone can download and run, and proprietary models such as the Muse series used for advanced generation.

This guide provides a clear overview of the assistant, the models, how to access them, subscription options for expanded features, and practical ways to use the ecosystem. Product details and availability evolve; always verify the latest information on official Meta pages.

REMEMBER

Meta AI (the assistant) is free for everyday use inside Meta apps. Llama models are open-weight and can be run locally or via third-party hosts. Muse models power more advanced media features, often with higher limits on paid plans.

Chapter 1

The Meta AI Assistant

The Meta AI assistant is available directly inside WhatsApp, Instagram, Facebook, Messenger, and via the standalone meta.ai experience. You can ask questions, get recommendations, generate or edit images, summarize content, and (depending on the surface) interact with multimodal features. It is also available on Ray-Ban Meta smart glasses for voice interaction.

Basic use is free. Higher usage of generative features (image and video creation, advanced editing tools such as Restyle) is available through Meta One subscriptions.

> **TIP**
>
> Start inside the apps you already use. Type or speak to Meta AI the same way you would message a contact. No separate signup is required for basic access.

Chapter 2

Llama Open-Weight Models

Llama is Meta's family of open-weight models. Current generations (including Llama 4 Scout and Maverick) are multimodal and available for download. Developers can run them locally, fine-tune them, or deploy them on their own infrastructure. Context windows vary; some variants support very long contexts.

Because the weights are open, the same model can be hosted by many providers (Together AI, Groq, cloud platforms such as Bedrock or Vertex AI, or self-hosted). There is no single first-party paid Llama API from Meta; access is through downloads or third-party hosts.

REMEMBER

Llama models are free to download and run under the applicable license. Hosted versions through third parties are billed by the host according to their pricing.

Chapter 3

Muse Models and Media Generation

Muse is Meta’s proprietary model family used for advanced image and video generation inside Meta AI and related features. These models power higher-quality or more specialized creative tools that go beyond basic free-tier generation.

Expanded access to Muse-powered generation and editing is a key benefit of Meta One Core and Premium plans. Availability and exact capabilities can vary by region and surface.

Chapter 4

Accessing Models: Download, Hosts, and APIs

For Llama: download weights from the official Llama site or Hugging Face, then run them with compatible software (llama.cpp, vLLM, or cloud instances). For hosted access, use partners such as Together AI, Groq, Amazon Bedrock, or Google Vertex AI Model Garden.

Meta has offered limited or preview API access in the past; always check current developer documentation. Proprietary Muse models are primarily accessed through Meta's own products and subscriptions rather than as a general public API.

TIP

If you want to experiment quickly, start with a third-party hosted Llama endpoint. For full control and privacy, download and run the model yourself.

Chapter 5

Subscriptions and Expanded Features

Meta One is the umbrella subscription that bundles premium features across Instagram, Facebook, WhatsApp, and Meta AI. Individual app Plus plans exist, and bundled Core (~$7.99/month) and Premium (~$19.99/month) plans add higher AI usage, more media generation with Muse, and tools such as Restyle. Creator and business tiers offer additional professional features.

Core Meta AI functionality remains free. Subscriptions primarily expand creative and generative limits and add app-specific perks. Exact pricing and feature sets can vary by region.

WARNING

Subscription benefits and usage limits can change. Review the current Meta One plan details in the apps or on Meta’s site before purchasing.

Chapter 6

Integrations and Practical Use

Common ways to use the ecosystem:

• Everyday questions and assistance → Meta AI inside WhatsApp, Instagram, or the meta.ai app.

• Image and video creation → Meta AI generative tools (higher limits on Meta One).

• Custom applications or local inference → Download Llama models and run them yourself.

• Hosted development → Use third-party Llama endpoints for prototyping or production.

• Voice and wearable interaction → Ray-Ban Meta glasses.

• Business automation → Meta Business Agent and related WhatsApp features on higher plans.

Best Practices

• Start with the free assistant to understand capabilities.

• For development, prefer open Llama models when control and cost matter.

• Review privacy and data policies for both consumer and hosted use.

• Monitor usage on subscription plans.

• Stay current with model releases and license terms.

Appendix A

Glossary

Meta AI: The consumer assistant available across Meta apps and meta.ai.

Llama: Meta’s open-weight model family available for download and third-party hosting.

Muse: Meta’s proprietary models used for advanced image and video generation.

Meta One: Subscription bundles that expand AI usage and add premium app features.

Open-weight: Models whose weights can be downloaded and run under the published license.

Hosted inference: Running a model through a third-party provider that charges per use.

Appendix B

Resources

• Meta AI: meta.ai or inside WhatsApp, Instagram, Facebook, Messenger

• Llama models and documentation: llama.com or ai.meta.com

• Meta for Developers AI resources: developers.meta.com

• Meta One subscription details: available in the apps or on Meta's site

• Third-party Llama hosts: Together AI, Groq, cloud provider model gardens
